# Apresentação

Este documento foi concebido com a finalidade de representar de forma sinótica todas as paletas de cor disponíveis no software livre BrOffice.org 2.4 e também com o objetivo de fornecer uma fonte para impressão de amostras de cor, uma vez que a representação da cor na tela do computador não é idêntica a representação da mesma cor na impressão.

As diferenças entre as cores na tela e na impressão ocorrem por dois motivos: o primeiro vem da formação da cor. Ao passo que a tela utiliza três cores – vermelho, azul e verde - e produz as demais cores a partir da combinação das ondas dos raios luminosos umas com as outras, a impressora utiliza quatro pigmentos: azul, magenta, amarelo e preto. Além disto, a tela do PC, por utilizar a projeção de luz, sempre apresenta as cores mais luminosas ao passo que a impressora, por utilizar deposição de pigmento sobre um substrato (via de regra o papel), sempre apresenta um resultado mais opaco. Além dos dois fatores citados, deve-se levar em consideração as características de cada impressora, como o tipo de pigmento (jato de tinta, laser e outros), resolução, modo de impressão (qualidade, rascunho e outros) e tipo de substrato ou papel utilizado.

Na distribuição das cores, as mesmas foram agrupadas por paleta e sempre que possível estão representadas na mesma seqüência da paleta. No entanto algumas cores foram deslocadas para permitir um melhor agrupamento pela seqüência cromática.

Esperamos que este documento possa ser útil aos usuários em geral, demonstrando as qualidades do BrOffice.org.

junho de 2008.
